

CD Burner XP is a program designed to allow users options that include the copying of Audio CDs, the conversion of certain audio file formats, the compilation of disparate files or file types onto one disc, or specific uses of DVDs which do not contain copy protection.

The recordable disc types addressed by CD Burner X are standard CD-Rs and DVDs. Blank discs are available from the library at the Reference and Tech Page desks. Each blank CD-R is 50 cents, and each blank DVD is \$1.00. Removable drives of 1 GB capacity are also available from RHPL at \$10.00 each. You may provide your own removable/recordable media, as well.

CD Burner XP has an intuitive design to assist users. However, the authors of the program have provided information that may be of value to those with

questions on its use. While specific information on the uses of the program may be found at the company's online page at (at <http://cdburnerxp.se/>), selected direct links to instructions on its use are found below.

#### AUDIO FORMAT CONVERSION:

In addition to copying CDs, CDBXP also can convert certain digital audio formats. For a listing of the audio formats addressed by the software, with further information, see the following link:

<http://cdburnerxp.se/help/Audio/formats>

**COPYING AN AUDIO CD.** To copy an audio disc that is playable in standard CD audio players, follow the “copy disc” or “audio disc” options on the program menu, depending upon your needs. DRM files are not supported. For the method of copying an audio disc (with CDBXP), see the following link:

<http://www.cdburnerxp.se/help/Audio/copyaudio>

**MAKING A COMPILATION AUDIO DISC.** This program also enables users the opportunity to make 5” audio discs playable in PC player programs or other digital storage-based products. To create a compilation audio disc with CD Burner XP that may use different, combined audio formats, please note the audio formats required, those supported by the program, and refer to the information at this link:

<http://cdburnerxp.se/help/Audio/compileaudio>

**MAKING AN MP3 AUDIO DISC.** Information on creating discs of MP3 audio files with CD Burner XP is available at this link:

<http://cdburnerxp.se/help/Audio/mp3cd>

**MAKING A DATA DISC.** The process of creating a data disc (with CDBXP), which may be comprised of MP3 audio files, graphic or video files, and/or other file types, is explained at the following link:

<http://cdburnerxp.se/help/Data/compiledata>

**COPYING A DATA DISC.** If your questions concern the duplication of an existing data disc, see the link at:

<http://cdburnerxp.se/help/Data/copydata>

**DVD CREATION.** CD Burner XP works with DVD image files, and is not a DVD authoring program. In certain cases, the process used to make a disc copy may be very similar to the creation of a data disc, but user needs may vary. The specific methods of use, and limitations involved, are explained at this link: <http://cdburnerxp.se/help/Data/create-video-dvd>

Other needs or questions that patrons may have involving the use of CD Burner XP may be addressed at the program’s website (<http://cdburnerxp.se/>).
